Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 115

Abrasive waterjet cutting
Contour cutting of pre-formed parts with abrasive waterjet using 3-axis nozzle control, 38
Activated diffusion brazing
Activated diffusion brazed repair for IN738 hot section components of gas turbines, 326
Aerofoil section
Temperature-related errors on aerofoil section of turbine blade, 240
Aerospace applications
Light-weight structures produced by laser beam joining for future applications in automobile and aerospace industry, 2
Ag–Cu–Ti alloy
Bonding of CVD diamond thick films using an Ag–Cu–Ti brazing alloy, 333
2124 Al–SiCp composites
Studies on shock consolidated 2124 Al–40 vol.% SiCp composites, 396
Aluminium
Hydroforming of sheet metal pairs from aluminium alloys, 65
Feasibility of warm drawing of aluminium products, 118
Aluminium and aluminium alloys
Laser forming of aluminium and aluminium alloys — microstructural investigation, 159
Aluminium foam
Mechanical properties of structures of semifinished products joined to aluminium foams, 20
Aluminium welding
Light-weight structures produced by laser beam joining for future applications in automobile and aerospace industry, 2
Aluminium–lithium alloy
Investigation of the behaviour of rare earth element cerium in aluminium–lithium alloys by the method of internal friction, 294
Aluminothermic reduction
Studies on preparation, characterisation and evaluation of properties of Fe_3Al-based intermetallic alloy of composition Fe–16Al–5.44Cr–1Nb–0.5C, 413
Aluminum alloys
Process control based on double-side image sensing of the keyhole in VPPA welding, 373
Analytical model
Closed-form solution for bulging through elliptical dies, 83
Anisotropy measurement
Behavior of sheet metal submitted to cyclic bending and stationary drawing deformation, 114
Arc
Flexible forming of sheet metal using plasma arc, 61
Asymmetrical fine-line etching
Theoretical and practical aspects of the miniaturization of lead frames by double sided asymmetrical spray etching, 108
Automotive applications
Light-weight structures produced by laser beam joining for future applications in automobile and aerospace industry, 2
Bending
Size effects in the processing of thin metal sheets, 44
Bending experiments
Process modelling for air bending: validation by experiments and simulations, 76
Blade
Computer aided manufacturing technologies for centrifugal compressor impellers, 284
Blank optimisation
Numerical simulations in optimisation of product and forming process, 122
Blanking
Size effects in the processing of thin metal sheets, 44
Bonding
Bonding of CVD diamond thick films using an Ag–Cu–Ti brazing alloy, 333

CAD
Computer aided manufacturing technologies for centrifugal compressor impellers, 284
CAM
Computer aided manufacturing technologies for centrifugal compressor impellers, 284
Carbide tools
Wear mechanisms of ultra-hard cutting tools materials, 402
Car-body
Uncertainty of coordinate measurements on sheet-metal parts in the automotive industry, 9
Catalytic converter
Fabrication of Fe–Cr–Al base alloy strips by melt dragging and their oxidation resistance at elevated temperature, 391
Cellular and stratified laminates
Joining of cellular and stratified laminates for light weight construction and thermal–acoustic insulation, 31
Chip formation
Machining of high chromium hardfacing materials, 423
Chromium carbides
Machining of high chromium hardfacing materials, 423
Cleanliness examination
Innovative high-performance process for dry manufacturing of sheet metal armatures and their integrated on-line cleanliness examination, 25
CNC
Contour cutting of pre-formed parts with abrasive waterjet using 3-axis nozzle control, 38
Coefficient of friction
Analysis of local loads on the draw die profile with regard to wear using the FEM and experimental investigations, 153
Cold roll forming
Production method on pipe of thin-spring steel sheet, 92
Cold-forging
Pressure contours on forming dies. Part 1. Simulation using physical modelling technique, 212

Elsevier Science B.V.
PII: S0924-0136(01)01083-4

Cold-power spinning
Experimental study on process of cold-power spinning of Ti–15–3 alloy, 380
Combined process
Surface modification of Al–Zn–Mg aluminum alloy using the combined process of EDM with USM, 359
Components
Nett-shape forming: state-of-the-art, 172
Composites processing
Studies on shock consolidated 2124 Al–40 vol.% SiCp composites, 396
Computer simulation
FEM analysis of mechanism of free deformation under dieless constraint in axial compressive forming process of tube, 367
Concurrent engineering
Numerical simulations in optimisation of product and forming process, 122
Constraints in air bending
Process modelling for air bending: validation by experiments and simulations, 76
Coordinate measuring machine
Uncertainty of coordinate measurements on sheet-metal parts in the automotive industry, 9
Cubic boron nitride
Wear mechanisms of ultra-hard cutting tools materials, 402
Cut kerf squareness
Pulsed mode laser cutting of sheets for tailored blanks, 131
Cutting
Machining of high chromium hardfacing materials, 423
Cutting speeds
A study of oblique cutting for different low cutting speeds, 313
Cyclic oxidation
Activated diffusion brazed repair for IN738 hot section components of gas turbines, 326

3D Tool face equation
A study of oblique cutting for different low cutting speeds, 313
Deep drawing
Mathematical modeling of laser-assisted deep drawing, 104
Deep-drawing die
Analysis of local loads on the draw die profile with regard to wear using the FEM and experimental investigations, 153
Design of experiments
Identifying variation in sheet metal stamping, 142
DF4B
Activated diffusion brazed repair for IN738 hot section components of gas turbines, 326
Diamond thick film
Bonding of CVD diamond thick films using an Ag–Cu–Ti brazing alloy, 333
Die/component interaction
Verification of the component accuracy prediction obtained by physical modelling and the elastic simulation of the die/component interaction, 256
Die-cavity
Overview of "Die-cavity elasticity considerations for nett-forming (DICAVITY)", 180
Finite element simulation for die-cavity compensation, 227
Die-cavity deflation
Temperature-related errors on aerofoil section of turbine blade, 240
Die-elasticity effect
Verification of the component accuracy prediction obtained by physical modelling and the elastic simulation of the die/component interaction, 256
Die-form
Overview of "Die-cavity elasticity considerations for nett-forming (DICAVITY)", 180
Economic considerations in die-form compensation for nett-forming, 260
Dieless constraint
FEM analysis of mechanism of free deformation under dieless constraint in axial compressive forming process of tube, 367
Draw die radius
Analysis of local loads on the draw die profile with regard to wear using the FEM and experimental investigations, 153
Drawing
Feasibility of warm drawing of aluminium products, 118
Dry manufacturing process
Innovative high-performance process for dry manufacturing of sheet metal armatures and their integrated on-line cleanliness examination, 25

EDM parameters
Study of the effect of machining parameters on the machining characteristics in electrical discharge machining of tungsten carbide, 344
Elasticity
Nett-shape forming: state-of-the-art, 172
Elasticity of die
Analysis of local loads on the draw die profile with regard to wear using the FEM and experimental investigations, 153
Electrical discharge machining
Numerical modelling of the generation of active surfaces of deep drawing dies, 127
Study of the effect of machining parameters on the machining characteristics in electrical discharge machining of tungsten carbide, 344
Surface modification of Al–Zn–Mg aluminum alloy using the combined process of EDM with USM, 359
Elevated temperature
Sheet metal forming of magnesium wrought alloys — formability and process technology, 14
Hydroforming of sheet metal pairs from aluminium alloys, 65
Feasibility of warm drawing of aluminium products, 118
Elliptical bulging
Closed-form solution for bulging through elliptical dies, 83
Energy absorption
Mechanical properties of structures of semifinished products joined to aluminium foams, 20
Error analysis
Concept of a design support system for form comparison, 245
Evolutionary algorithms
Shape optimization of sheet metal parts in a flexible production environment, 136
Experimental study
Experimental study on process of cold-power spinning of Ti–15–3 alloy, 380
Explosive compassion
Studies on shock consolidated 2124 Al–40 vol.% SiCp composites, 396

Fe–Cr–Al alloy
Fabrication of Fe–Cr–Al base alloy strips by melt dragging and their oxidation resistance at elevated temperature, 391
FEM
Improved tool design for fine blanking through the application of numerical modeling techniques, 70
Process modelling for air bending: validation by experiments and simulations, 76
FEM analysis of mechanism of free deformation under dieless constraint in axial compressive forming process of tube, 367
Fine blanking
Improved tool design for fine blanking through the application of numerical modeling techniques, 70

Finite difference
A study of oblique cutting for different low cutting speeds, 313
Finite element
A study of oblique cutting for different low cutting speeds, 313
Finite element analysis
Die compensation procedure to negate die deflection and component springback, 187
Finite element simulation
Overview of "Die-cavity elasticity considerations for nett-forming (DICAVITY)", 180
Pressure contours on forming dies. Part II: Finite element simulation, 220
Finite element simulation for die-cavity compensation, 227
Flexible-die forming
Process parameters and products quality analysis of flexible-die deep-drawing using a viscoplastic pressure-carrying medium, 384
Forming
Flexible forming of sheet metal using plasma arc, 61
Forming error
Concept of a design support system for form comparison, 245
Free deformation
FEM analysis of mechanism of free deformation under dieless constraint in axial compressive forming process of tube, 367
Friction
Development of a commercial transducer for measuring pressure and friction on a model die surface, 205
Front and back image
Process control based on double-side image sensing of the keyhole in VPPA welding, 373

Geometrical model
The general geometrical models of the design and 2-axis NC machining of a helical end-mill with constant pitch, 265
Study on the 2-axis NC machining of a toroid-shaped cutter with a constant angle between the cutting edge and the cutter axis, 338
Gluing
Mechanical properties of structures of semifinished products joined to aluminium foams, 20
Grain boundary
Investigation of the behaviour of rare earth element cerium in aluminium–lithium alloys by the method of internal friction, 294
Grain size
Size effects in the processing of thin metal sheets, 44

Hardfacing
Machining of high chromium hardfacing materials, 423
Hardness test
Laser forming of aluminium and aluminium alloys — microstructural investigation, 159
Helical end-mill with constant pitch
The general geometrical models of the design and 2-axis NC machining of a helical end-mill with constant pitch, 265
Heuristic rule
Analysis of a torque equilibrium model and the optimal strip working sequence for a shearing-cut and bending progressive die, 302
High temperature oxidation
Fabrication of Fe–Cr–Al base alloy strips by melt dragging and their oxidation resistance at elevated temperature, 391
Hydroforming
Manufacturing system for the integrated hydroforming, trimming and welding of sheet metal pairs, 49
Hydroforming of sheet metal pairs from aluminium alloys, 65
Hydroforming, 87
Hydrostatic bulging
Closed-form solution for bulging through elliptical dies, 83

Impeller
Computer aided manufacturing technologies for centrifugal compressor impellers, 284
Integrated circuits
High precision solder droplet printing technology and the state-of-the-art, 271
Internal friction
Investigation of the behaviour of rare earth element cerium in aluminium–lithium alloys by the method of internal friction, 294
Inverting-forming
FEM analysis of mechanism of free deformation under dieless constraint in axial compressive forming process of tube, 367
Iron aluminide alloy
Studies on preparation, characterisation and evaluation of properties of Fe_3Al-based intermetallic alloy of composition Fe–16Al–5.44Cr–1Nb–0.5C, 413

Joining of material combinations
Light-weight structures produced by laser beam joining for future applications in automobile and aerospace industry, 2

Keyhole puddle
Process control based on double-side image sensing of the keyhole in VPPA welding, 373
Kinematic generation
Numerical modelling of the generation of active surfaces of deep drawing dies, 127

Laminated drives
Innovative high-performance process for dry manufacturing of sheet metal armatures and their integrated on-line cleanliness examination, 25
Laser
Flexible forming of sheet metal using plasma arc, 61
Laser beam welding
Mechanical properties of structures of semifinished products joined to aluminium foams, 20
Manufacturing system for the integrated hydroforming, trimming and welding of sheet metal pairs, 49
Laser cutting
Pulsed mode laser cutting of sheets for tailored blanks, 131
Laser forming
Laser forming of aluminium and aluminium alloys — microstructural investigation, 159
Laser materials processing
Mathematical modeling of laser-assisted deep drawing, 104
Layer milling
Rapid tooling approaches for small lot production of sheet-metal parts, 97
Lead frames
Theoretical and practical aspects of the miniaturization of lead frames by double sided asymmetrical spray etching, 108
Light weight construction
Joining of cellular and stratified laminates for light weight construction and thermal–acoustic insulation, 31
Hydroforming of sheet metal pairs from aluminium alloys, 65
Light-weight structure
Light-weight structures produced by laser beam joining for future applications in automobile and aerospace industry, 2

Machining characteristics
Study of the effect of machining parameters on the machining characteristics in electrical discharge machining of tungsten carbide, 344

Magnesium alloys
Sheet metal forming of magnesium wrought alloys — formability and process technology, 14
Magnetic steel sheets
Innovative high-performance process for dry manufacturing of sheet metal armatures and their integrated on-line cleanliness examination, 25
Marketing
Platforms: engineering panacea, marketing disaster?, 166
Material removal rate
Study of the effect of machining parameters on the machining characteristics in electrical discharge machining of tungsten carbide, 344
Measurement uncertainty
Uncertainty of coordinate measurements on sheet-metal parts in the automotive industry, 9
Melt dragging
Fabrication of Fe–Cr–Al base alloy strips by melt dragging and their oxidation resistance at elevated temperature, 391
Metal forming
Behavior of sheet metal submitted to cyclic bending and stationary drawing deformation, 114
Metallic substrate
Fabrication of Fe–Cr–Al base alloy strips by melt dragging and their oxidation resistance at elevated temperature, 391
Metal–matrix composites
Studies on shock consolidated 2124 Al–40 vol.% SiCp composites, 396
Metrology
Selective measuring of freeform surfaces for quality control and selective maintenance of bending tools, 147
Microstructure
Laser forming of aluminium and aluminium alloys — microstructural investigation, 159
Sintering and microstructure of silicon nitride with magnesia and cerium additives, 298
Model material technique
Development of a commercial transducer for measuring pressure and friction on a model die surface, 205
Multi-axis transducer
Technical feasibility of a three-axis force transducer for measuring pressure and friction on the model die surface — prototype development, 192

NC machining
The general geometrical models of the design and 2-axis NC machining of a helical end-mill with constant pitch, 265
Net-shape forming
Die compensation procedure to negate die deflection and component springback, 187
Secondary yielding of forged components due to unloading, 233
Nett-forging
Concept of a design support system for form comparison, 245
Nett-forming
Finite element simulation for die-cavity compensation, 227
Economic considerations in die-form compensation for nett-forming, 260
Nett-forming operations
Verification of the component accuracy prediction obtained by physical modelling and the elastic simulation of the die/component interaction, 256
Nett-shape
Overview of "Die-cavity elasticity considerations for nett-forming (DICAVITY)", 180
Nett-shape forming
Nett-shape forming: state-of-the-art, 172
Nicrobraz 150
Activated diffusion brazed repair for IN738 hot section components of gas turbines, 326
Nonreplicated
Identifying variation in sheet metal stamping, 142
Numerical modelling
Numerical modelling of the generation of active surfaces of deep drawing dies, 127
Numerical simulation
Behavior of sheet metal submitted to cyclic bending and stationary drawing deformation, 114
Numerical simulations in optimisation of product and forming process, 122

Obligue cutting
A study of oblique cutting for different low cutting speeds, 313
Operating windows
Identifying variation in sheet metal stamping, 142
Optimal
Analysis of a torque equilibrium model and the optimal strip working sequence for a shearing-cut and bending progressive die, 302

PCBN tools
Machining of high chromium hardfacing materials, 423
Physical model technique
Pressure contours on forming dies. Part 1. Simulation using physical modelling technique, 212
Physical modelling
Die compensation procedure to negate die deflection and component springback, 187
Technical feasibility of a three-axis force transducer for measuring pressure and friction on the model die surface — prototype development, 192
Pressure contours on forming dies. Part II: Finite element simulation, 220
Economic considerations in die-form compensation for nett-forming, 260
Piezoelectricity
Technical feasibility of a three-axis force transducer for measuring pressure and friction on the model die surface — prototype development, 192
Plasma
Flexible forming of sheet metal using plasma arc, 61
Platforms
Platforms: engineering panacea, marketing disaster?, 166
Polycrystalline diamond
Wear mechanisms of ultra-hard cutting tools materials, 402
Powder metallurgy
Studies on shock consolidated 2124 Al–40 vol.% SiCp composites, 396
Press technology
Hydroforming, 87
Pressure contour
Pressure contours on forming dies. Part 1. Simulation using physical modelling technique, 212
Pressure contours on forming dies. Part II: Finite element simulation, 220
Process integration
Manufacturing system for the integrated hydroforming, trimming and welding of sheet metal pairs, 49
Production strategy
Platforms: engineering panacea, marketing disaster?, 166
Pulse mode
Pulsed mode laser cutting of sheets for tailored blanks, 131

Quality control
Selective measuring of freeform surfaces for quality control and selective maintenance of bending tools, 147

Quick-stop
Machining of high chromium hardfacing materials, 423

Rapid prototyping
Rapid tooling approaches for small lot production of sheet-metal parts, 97
Laser forming of aluminium and aluminium alloys — microstructural investigation, 159
Rapid tooling
Rapid tooling approaches for small lot production of sheet-metal parts, 97
Rare earth element
Investigation of the behaviour of rare earth element cerium in aluminium–lithium alloys by the method of internal friction, 294
Remanence air gap
Innovative high-performance process for dry manufacturing of sheet metal armatures and their integrated on-line cleanliness examination, 25
Remelting
Studies on preparation, characterisation and evaluation of properties of Fe_3Al-based intermetallic alloy of composition Fe–16Al–5.44Cr–1Nb–0.5C, 413
Resin casting
Rapid tooling approaches for small lot production of sheet-metal parts, 97
Resistance welding
Joining of cellular and stratified laminates for light weight construction and thermal–acoustic insulation, 31
Reverse engineering
Computer aided manufacturing technologies for centrifugal compressor impellers, 284
Revolving surface
Study on the 2-axis NC machining of a toroid-shaped cutter with a constant angle between the cutting edge and the cutter axis, 338
Rolling
Generation and forming of spray-formed flat products, 55

Secondary yielding
Secondary yielding of forged components due to unloading, 233
Series production
Hydroforming, 87
Shape optimization
Shape optimization of sheet metal parts in a flexible production environment, 136
Shearing-cut and bending progressive die
Analysis of a torque equilibrium model and the optimal strip working sequence for a shearing-cut and bending progressive die, 302
Sheet
Feasibility of warm drawing of aluminium products, 118
Sheet metal
Contour cutting of pre-formed parts with abrasive waterjet using 3-axis nozzle control, 38
Flexible forming of sheet metal using plasma arc, 61
Process parameters and products quality analysis of flexible-die deep-drawing using a viscoplastic pressure-carrying medium, 384
Sheet metal forming
Sheet metal forming of magnesium wrought alloys — formability and process technology, 14
Manufacturing system for the integrated hydroforming, trimming and welding of sheet metal pairs, 49
Sheet-metal forming tools
Rapid tooling approaches for small lot production of sheet-metal parts, 97
Shortened process chain
Manufacturing system for the integrated hydroforming, trimming and welding of sheet metal pairs, 49
Silicon nitride
Sintering and microstructure of silicon nitride with magnesia and cerium additives, 298
Simulation
Process modelling for air bending: validation by experiments and simulations, 76
Hydroforming, 87
Sintering
Sintering and microstructure of silicon nitride with magnesia and cerium additives, 298
Size effects
Size effects in the processing of thin metal sheets, 44
Smelting
Studies on preparation, characterisation and evaluation of properties of Fe_3Al-based intermetallic alloy of composition Fe–16Al–5.44Cr–1Nb–0.5C, 413
Solder droplet printing technology
High precision solder droplet printing technology and the state-of-the-art, 271
Solder paste printing
High precision solder droplet printing technology and the state-of-the-art, 271
Solid modelling
Concept of a design support system for form comparison, 245
Spray etching
Theoretical and practical aspects of the miniaturization of lead frames by double sided asymmetrical spray etching, 108
Spray forming
Generation and forming of spray-formed flat products, 55
Springback
Finite element simulation for die-cavity compensation, 227
Stainless steel 304
Joining of cellular and stratified laminates for light weight construction and thermal–acoustic insulation, 31
Stamping process
Numerical simulations in optimisation of product and forming process, 122
Steel supply
Platforms: engineering panacea, marketing disaster?, 166
STEP
Shape optimization of sheet metal parts in a flexible production environment, 136
Strip
Fabrication of Fe–Cr–Al base alloy strips by melt dragging and their oxidation resistance at elevated temperature, 391
Superplastic material
Closed-form solution for bulging through elliptical dies, 83
Surface modification
Surface modification of Al–Zn–Mg aluminum alloy using the combined process of EDM with USM, 359
Surface roughness
Study of the effect of machining parameters on the machining characteristics in electrical discharge machining of tungsten carbide, 344

Tailored blank
Pulsed mode laser cutting of sheets for tailored blanks, 131
Tensile test
Sheet metal forming of magnesium wrought alloys — formability and process technology, 14
Thermal–acoustic insulation
Joining of cellular and stratified laminates for light weight construction and thermal–acoustic insulation, 31

Thermit process
Studies on preparation, characterisation and evaluation of properties of Fe_3Al-based intermetallic alloy of composition Fe–16Al–5.44Cr–1Nb–0.5C, 413
Thin sheets
Size effects in the processing of thin metal sheets, 44
Thin-spring steel sheet
Production method on pipe of thin-spring steel sheet, 92
Ti–15–3 alloy
Experimental study on process of cold-power spinning of Ti–15–3 alloy, 380
Titanium alloys
Wear mechanisms of ultra-hard cutting tools materials, 402
Titanium welding
Light-weight structures produced by laser beam joining for future applications in automobile and aerospace industry, 2
Tool design
Improved tool design for fine blanking through the application of numerical modeling techniques, 70
Tools
Selective measuring of freeform surfaces for quality control and selective maintenance of bending tools, 147
Toroid-shaped cutter
Study on the 2-axis NC machining of a toroid-shaped cutter with a constant angle between the cutting edge and the cutter axis, 338
Transducer
Development of a commercial transducer for measuring pressure and friction on a model die surface, 205
Tribological stress
Analysis of local loads on the draw die profile with regard to wear using the FEM and experimental investigations, 153
Tribology
Improved tool design for fine blanking through the application of numerical modeling techniques, 70
Tube precision forming
FEM analysis of mechanism of free deformation under dieless constraint in axial compressive forming process of tube, 367
Tungsten carbide
Study of the effect of machining parameters on the machining characteristics in electrical discharge machining of tungsten carbide, 344
Turbine blade
Temperature-related errors on aerofoil section of turbine blade, 240

Ultrasonic machining
Surface modification of Al–Zn–Mg aluminum alloy using the combined process of EDM with USM, 359
Uniaxial tension
Size effects in the processing of thin metal sheets, 44

Vehicle manufacturers
Platforms: engineering panacea, marketing disaster?, 166
Verification
Process modelling for air bending: validation by experiments and simulations, 76
VPCM
Process parameters and products quality analysis of flexible-die deep-drawing using a viscoplastic pressure-carrying medium, 384
VPPA welding
Process control based on double-side image sensing of the keyhole in VPPA welding, 373

Wear mechanism
Wear mechanisms of ultra-hard cutting tools materials, 402
Welding robot
Manufacturing system for the integrated hydroforming, trimming and welding of sheet metal pairs, 49
Work hardening
Behavior of sheet metal submitted to cyclic bending and stationary drawing deformation, 114
Working sequence
Analysis of a torque equilibrium model and the optimal strip working sequence for a shearing-cut and bending progressive die, 302
Wound up pipe
Production method on pipe of thin-spring steel sheet, 92
